

MUNICIPAL ENGINEERING

As a public official in a growing municipality you face particularly challenging community development issues. **Boucher & James** can help by providing the consulting services you need to develop solutions for both current and future growth.

The professional, experienced staff of **Boucher & James** assists with services that go far beyond analysis of environmental features existing infrastructure to include sound financial planning. In fact, **Boucher & James** can even assist your municipality in obtaining federal and state grants through the design and administering of funding application packages. Such grants are available for localized improvements such as flood control, parkland development, highways, bridges, water-supply systems, and wastewater treatment facilities.

A good example of how **Boucher & James** can help is the total support we provided to a historic Pennsylvania town that was the site of a catastrophic fire. Utilizing the many engineering disciplines of our professional staff, we were able to successfully develop and implement infrastructure reconstruction plans for the town in a joint effort with area utility companies and the Pennsylvania Department of Transportation.
